

CTL Demo Market Snapshot

Styled PDF source for Copy, Tag, Link ingestion

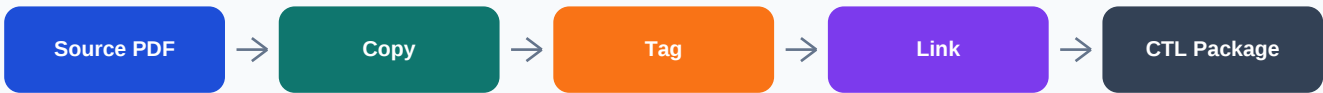

Generated sample | Public demo data

Summary

Semantic HTML can preserve document structure before any database, vector store, or graph layer is added. The original document remains in the CTL package, while extracted records link back to the source and copied assets.

Adoption Signals

Signal	Value	Note
HTML structure	High	Headings, tables, figures, and links remain visible.
Database requirement	None	The package opens as static files.
Adapter flexibility	High	Indexes can be rebuilt from the CTL package.

Original stays preserved. Assets, records, search indexes, and OKF cards stay linked.

Generated diagram: source data becomes a portable CTL package.

Image Asset

Generated image: reusable visual asset embedded in the PDF.
